## DETAILED ACTION

### *Specification*

The abstract of the disclosure is objected to because it appears to be too long and might exceed 150 words in length. Correction is required. See MPEP § 608.01(b).

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 11 recites the limitation "the electronic component" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specification discloses a "baseband circuit (300) as a semiconductor integrated circuit", see page 36, but it is unclear how "a semiconductor integrated circuit (baseband circuit (300)) for control which generates and supplies a control signal to each of said electronic components". Does applicant mean microprocessor (CPU/500) instead?

Art Unit: 2817

Note, Figure 11 shows CPU generates a plurality of control signals to baseband (300), RF IC (110), output power control circuit (230), and change-over switches (420).

Phrases/functions **“for control which generates and supplies ...”** and **“for control to said electronic component for high frequency power amplifier”** in the last two limitations of claim 11 appear to be unclear and need to be reworded. And **likewise for claim 13 which also discloses phrase “for control to said ...”** in lines 4 and 8.

#### ***Allowable Subject Matter***

Claims 1-10 are allowed.

Claims 11-13 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 1-13 call for, among others, a schematic of an error amplification circuit including a differential amplification circuit, a first resistance, a second resistance, and a capacitor having the connections thereof.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Ueno et al. (6,172,567); Matsushita et al. (6,605,999); Matsunaga et al. (6,759,906)) show further analogous prior art circuitry having voltage control.
